Steam Traps

UNA 23h/v, PN 16, DN 15, 20, 25, 40, 50

UNA 25h/v, PN 40, DN 15, 20, 25, 40, 50

UNA 26h/v, PN 40, DN 15, 20, 25, 40, 50

UNA 26h Stainless Steel, PN 40, DN 15, 20, 25, 40, 50

Description

UNA 2.. are ball float traps with rolling ball closing mechanisms (control unit SIMPLEX / DUPLEX) or with bellows-type closing mechanism (control units SIMPLEX-MAX/DUPLEX-MAX). The steam traps work independently of back pressure, thus ensuring universal application.

The steam trap UNA 2.. features a body with bolted cover and a regulating unit. The component parts can be exchanged after removing the cover but without having to take the equipment out of the pipe (easy in-line maintenance). Different types of regulating unit are available for the steam traps.

The regulating unit **SIMPLEX** is a level-dependent float-actuated control unit and particularly well suited for cold condensate and superheated steam. The regulating unit **DUPLEX** is a float-actuated control unit for temperature-dependent and automatic deaeration of saturated steam systems.

The regulating unit **SIMPLEX-MAX** is a level-dependent float-actuated control unit for large condensate flowrates and particularly well suited for cold condensate and superheated steam. The regulating unit **DUPLEX-MAX** is a float-actuated control unit for large condensate flowrates and suitable for the temperature-dependent and automatic deaeration of saturated steam systems.

UNA 2...h for installation in horizontal lines

UNA 2...v for installation in vertical lines

The steam trap UNA 23 h/v is also available with an integrated sightglass cover for level indication.

Function

The ball valve of the control unit is operated by the float as a function of the condensate level in the trap. The cross-sectional area (CSA) of the orifice dictates the max. flowrate when the valve is completely open. The max. admissible differential pressure of the control unit is a function of the CSA of the orifice and the density of the fluid to be discharged, and limited by the specified pressure / temperature ratings of the trap body. There are different closing units (orifices) available which can also be exchanged subsequently.

Float traps equipped with control units DUPLEX, DUPLEX-MAX enable automatic temperature-dependent deaeration of saturated steam systems during start-up and continuous operation.

Pressure / Temperature Ratings & End Connections

UNA 23h/v, Flange PN 16, EN 1092-2, DN 15-50

Orifices – continued –

Orifices (O) DN 15-25 (½" – 1")	K _{VS} value [m³/h]	Ø of bore [mm]
0 2	1.50	8.0
0 4	0.90	6.0
0 8	0.58	4.8
0 13	0.44	4.1
0 22	0.38	3.5
0 32	0.31	3.0

Orifices (O) DN 40, 50 (1½", 2")	K _{VS} value [m³/h]	Ø of bore [mm]
0 2	6.0	15.0
0 4	4.1	12.5
0 4 MAX	16.6	27.5
0 8	3.2	10.0
0 8 MAX	10.6	19.4
0 13	2.1	8.5
0 13 MAX	7.7	15.3
0 22	1.5	7.0
0 32	1.1	6.5

The K_V value is the measured flowrate of water (at 5 to 30 °C) in [m³/h] at a pressure drop of 1 bar and the associated opening degree of the closing unit (orifice).

The K_{VS} value is the K_V value when the closing unit (orifice) is completely open.

For more information refer to the Capacity Chart on page 10.

5 6	Hand vent valve with gasket	560 125		
6 25 26 27 28	Air-venting unit, complete, for control unit DUPLEX-MAX		560 548	

1) Minimum order quantity 20 items.

2) Minimum order quantity 10 items. Contact your local dealer for smaller quantities.

Steam Traps

UNA 23h/v

UNA 25h/v

UNA 26h/v

UNA 26h Stainless Steel

Capacity Chart

The chart shows the maximum capacities of hot condensate for the range of orifices.

The capacities are dependent on the differential pressure (working pressure). The differential pressure is the difference between inlet and outlet pressures and depends among other things on the run of the pipe. If the condensate downstream of the trap is lifted, the differential pressure is reduced by approximately 1 bar for 7 m in lift.

The max. admissible differential pressure is a function of the cross-sectional area of the orifice and the density of the fluid to be discharged.

Solid line curves

show the max. flowrate of hot condensate that the steam traps UNA 23, UNA 25 and UNA 26 can discharge with virtually no banking-up.

The cold water capacities are:

Capacity of hot condensate multiplied by factor F.

Cold water capacity UNA 2.-MAX

The cold water capacity of steam traps with SIMPLEX-MAX / DUPLEX-MAX control unit is:

Flowrate multiplied by factor F.

For differential pressure $\Delta PMX > 1$ bar the following factors are applicable:

AO 4 MAX, AO 8 MAX: factor F = 1.65

AO 13 MAX, AO 22 MAX, AO 32 MAX: factor F = 1.45

When ordering please indicate

Body material, material of screws/bolts, steam pressure & temperature, back pressure, condensate flowrate, trap model, end connection, size, orifice number, details of application or type of steam user.

The following test certificates can be issued on request, at extra cost:

In accordance with EN 10204-2.1, -2.2, -3.1 and 3.2.

All inspection requirements have to be stated with the order. After supply of the equipment certification cannot be established. For other test certificates, tests and inspection charges please consult us.

PED (Pressure Equipment Directive)

The equipment fulfills the requirements of the Pressure Equipment Directive PED 97/23/EC.

UNA 23 and UNA 25 for applications with fluids of group 2; UNA 26, UNA 26h stainless steel and UNA 27h for applications with fluids of group 1 and 2.

With CE marking (apart from equipment according to section 3.3).

ATEX (Atmosphère Explosible)

The equipment does not have its own potential source of ignition and is therefore not subject to the ATEX Directive 94/9/EC. The equipment can be used in potentially explosive areas 0, 1, 2, 20, 21, 22 (1999/92/EC). The equipment is not Ex marked.

Supply in accordance with our general terms of business.
